About GlassHouse and NextLabs

NextLabs and GlassHouse offer a comprehensive solution for Information Risk Management. NextLabs provides enterprise software solutions for active information control, automated policy management, and end user education to reduce information risk. GlassHouse has deep and broad expertise in data classification, policy development, and program management to help customers evaluate, plan, and implement enterprise solutions.

As an independent IT consulting and services company, GlassHouse offers unique insight into industry trends and best practices for data and storage management—focused on reducing risk, decreasing costs, and improving the alignment of business information and the infrastructure that supports it. NextLabs' Compliant Enterprise® provides active controls to measure, educate, automate, and report policy conformance, supporting flexible, yet secure, communication and collaboration across a global workforce and partner network.

The Information Risk Management partnership offers a comprehensive set of services for implementation of information governance, risk, and control best practices. Whether you require:

- Comprehensive policy formulation,
- implementation of active information controls to measure, report, educate or automate policy conformance, or
- more flexible active information control systems that support communication and collaboration across a global workforce and partner network.

GlassHouse and NextLabs provide a unique value proposition, blending enterprise active information control with industry leading best practices for data classification and management to rapidly address your needs.

A Comprehensive Portfolio of Information Risk Management Services and Solutions

Reducing information misuse and improper disclosure is a major concern for today's enterprises. Monitoring and controlling information handling to identify and mitigate risks is an imperative for data security and compliance. Rapid, dynamic implementation of information control procedures is essential to remain competitive. Now, businesses are more exposed due to increased connectivity, workforce mobility, and dependence on global supply chains consisting of remote users, partners, outsourcers, and suppliers. A new approach is needed that protects information handling comprehensively for today's complex environments.

GlassHouse and NextLabs have joined to provide a comprehensive approach to managing information risk that includes software and services:

- Risk discovery, assessment and solution pilots that help you to identify your requirements.
- Policy planning and development of a solution that is designed to meet your business needs.
- Integration planning, solution implementation, and user training to prepare your environment.

- Process integration and ongoing support with a bi-annual health check-up service to audit solution effectiveness and close gaps.

Getting Started Now

The GlassHouse Information Risk Management Practice (IRMP) provides a full suite of services that align corporate IT resources and activities with their information risk profile, by developing and implementing a strategic information risk management plan. Three programs help customers to get started quickly:

Information Risk Assessment Program (IRAP)

Provides a real-time snapshot of user and information practices that reveal improper information handling and disclosure risk. An Executive Report provides actionable recommendations for policies and controls.

Solution Proof of Concept

Demonstrates clearly that an implementation approach will appropriately manage information risks for identified use cases. Deliverables include POC results and a supporting business case for a full implementation.

Unstructured Data Management Service

A strategic offering that delivers an actionable strategy to reduce risk, cost, and complexities associated with managing unstructured data. GlassHouse delivers this service using proprietary tools and methodologies. Deliverables include prioritized unstructured data use cases, an implementation proof of concept, and a supporting business case for a full implementation.

Risk Management Solutions Powered by Compliant Enterprise

Compliant Enterprise is an active policy management system for controlling information risks. Companies use the solution to develop policies that describe appropriate information use in clear business terms. These are stored in a central policy management server that works with policy enforcer software running at control points. Control points can be client devices like desktop computers or laptops, or servers. Compliant Enterprise features a full suite of policy development, policy management, information activity reporting, and policy forensic analysis tools.
