

# Entitlement Manager for Windows Desktop

## THE SITUATION

Windows Desktop has been and continues to be an important tool in our daily jobs. We use it to transmit data of all kinds – spreadsheets, product designs, sales forecasts, etc. As such, it can be a prime vehicle for data loss or leakage – whether inadvertently or maliciously.

Additionally, it's not just internal communications you have to worry about. You also have to consider external communications with trusted outsiders such as OEM partners, suppliers, or systems integrators. This leaves companies in need of a solution that enables granular control over the distribution of data both inside and outside the company.

---

## THE SOLUTION

NextLabs' Entitlement Manager for Windows Desktop (EMWD) enforces policies that control how and whether users access and use information at the endpoint.

Key capabilities include:

- Granular controls over whether users can access particular files
- Granular controls over what users can do with particular files
- Compatibility with Entitlement Manager for SharePoint (i.e., can extend the functionality of Entitlement Manager for SharePoint down to the desktop)

## THE BENEFITS

EMWD enables you to reap the following benefits:

- Externalize authorization management to simplify and reduce the time spent on administering access control policies
- React more rapidly to changes in business requirements, market conditions, or regulatory environment since policy changes can be made without requiring code changes or application downtime
- Lower your total cost of ownership as you can leverage your existing investment in the NextLabs platform
- Reduce the cost of compliance through more efficient and cost-effective monitoring and audit of your data

## KEY FEATURES

Feature	Detail
Access controls	Control whether users can access particular files based on file, user, or computer properties
Usage controls	Control what users can do with particular files based on file, user, or computer properties
Compatibility with Entitlement Manager for SharePoint	Control where SharePoint data is stored, moved, and used, even after it has been downloaded to a local directory
Compatibility with removable devices	Control copying data to removable devices
Notifications	EMWD can be configured to run with notifications turned on
Obligations Supported	File tagging based on policy, View Overlay and Print Overlay based on policy

### ABOUT NEXTLABS

NextLabs provides data-centric security software to protect business-critical data and applications. Our patented dynamic authorization technology and industry-leading attribute-based policy platform help enterprises identify and protect data, monitor and control access to sensitive data, and help prevent regulatory violations—whether on the cloud or on premise.

The software automates enforcement of security controls and compliance policies to enable secure information sharing across the extended enterprise. NextLabs has some of the largest global enterprises as customers and has strategic relationships with industry leaders.
