Customer Success Story: Using NextLabs for Compliance at Petrobras

## Customer Success Story: Using NextLabs for Compliance at Petrobras

For Petrobras, ensuring access to business-critical data on a need-to-know basis is crucial to ensure their information is protected from data loss. NextLabs helped Petrobras address their need to improve the security of their confidential and personal data with solutions that use attribute-based access control (ABAC) and dynamic authorization technology. This dynamic approach not only addresses Petrobras' need to remain in compliance and maintain agility with the advancement of new regulations for the protection of personal data and business-critical data but also helps automate role provisioning, strengthen SAP security profiles, as well as improve data management and access control.

Petrobras started the #trans4mar Project in 2019, the largest digital transformation project in Latin America, to convert its SAP ERP from ECC to S/4HANA while reviewing and improving select business processes. Petrobras IT with the support of Deloitte and NextLabs resources, worked in tight collaboration to implement the primary deliverable of NextLabs SAP DAM within four months to quickly deploy and meet the data governance-initiatives set forth.

With this zero-trust data-centric approach using SAP DAM, Petrobras is now able to ensure fine-grained access control for applications that create, store, or modify personal data. To further protect privacy, data is dynamically masked on transaction fields where personal data is present. This is taken one step further, by also dynamically segregating data for reports, ensuring that personally identifiable information (PII) and business-critical data are protected, helping maintain data privacy.

Marcelo Rosenthal of Petrobras is presenting a case study on their NextLabs deployment at SAPinsider Las Vegas 2024. The session is called "Case Study – Attribute Based Access Control (ABAC) Implementation at Petrobras using NextLabs Zero-Trust Data-Centric Security Solution" and will be on March 21, 2024 at 9:00. If you are attending the conference, please attend this session and visit NextLabs' booth (#1065).

## NextLabs® Releases Data Access Enforcer for Oracle ERP

Extending NextLabs' expertise in securing business processes to Oracle ERP product lines

San Mateo, Calif. – February 5, 2024 – NextLabs announced the release of Data Access Enforcer for Oracle ERP (DAE for Oracle ERP), bringing the dynamic enforcement of NextLabs Zero Trust Data-Centric security policies to both Oracle EBS and Oracle Fusion ERP product lines. DAE helps Oracle ERP users control access to their business process data through attribute-driven policies that are dynamically enforced at runtime, allowing those policies to be applied regardless of how the data is being accessed in a way that is seamless and transparent for ERP users.
